

Rmarkdown_template 1

Jiawei Fu

1/26/2020

Basics 1

Write the header by using “#”; and you can control the size by adding more “#”.

For example, in the assignment, you can:

Question 1: here, you basically copy and paste the question.

(a): balabala

Solution: answer the questions here.

(b): balabala

You can put the codes in the R code chunk:

```
### r codes example
set.seed(320)

rand <- rnorm(50)  ### draw samples
plot(density(rand))  ### plot the density
```

density.default(x = rand)

Sometimes, you would like use Inline R code. You can evaluate R expressions inline by enclosing the expression within a single back-tick qualified with 'r'.

For example, I want to know $941+134=1075$. (See rmd file how I calculate)

Creat list using the dash:

- item 1
- item 2

Emphasize with asterisk mark:

important or **important**

Mathematics 1

Write equations between \$\$ and \$\$. For example,

$$x_i + z^j = 8 - t$$

You can write inline equations between two dollar signs, \$ equations \$. For example: $y_i = 5x_i + 6$.

Also, use COMMAND aligned and &, one can write clean and beautiful equations: (see rmd file)

$$\begin{aligned} x_{ij} + z^{ij} &= 8 - t \\ y_i + z_i + t &= \frac{5}{7} \end{aligned}$$

If you like the Greek letters:

$\alpha \beta \gamma \delta \theta$
